Phriendly Phishing

Passphrases

If you're currently using weak passwords (or the same password everywhere), you're making it easy for scammers to access your accounts.

Keep your accounts safe with Passphrases.
Setting up unique passphrases (of 12 or more characters) can help protect your accounts & personal data from savvy hackers.

1 Choose two decent sized & easy to remember words → **jumpingfrogs**

2 Capitalise some of the characters in the words → **jumpinGfroGs**

3 Include 1 or 2 special characters → **jumpinG#froGs**

4 Add a number → **2jumpinG#froGs**

5 Add a space to finish your passphrase → **2 jumpinG#froGs**
